Supramolecular Chirality Transfer

Everhardus Wilt Dijk

**university of
groningen**

The work described in this thesis was carried out at the laboratories of the Stratingh Institute for Chemistry and the Groningen Biomolecular Sciences and Biotechnology Institute, University of Groningen, the Netherlands. It was financially supported by the Dutch Foundation for Scientific Research (NWO) and NanoNed.

RIJKSUNIVERSITEIT GRONINGEN

Supramolecular Chirality Transfer

Proefschrift

ter verkrijging van het doctoraat in de
Wiskunde en Natuurwetenschappen
aan de Rijksuniversiteit Groningen
op gezag van de
Rector Magnificus, dr. F. Zwarts,
in het openbaar te verdedigen op
vrijdag 19 maart 2010
om 13:15 uur

door

Everhardus Wilt Dijk

geboren op 31 maart 1981
te Leek

Promotor : Prof. dr. B.L. Feringa

Copromotor : Dr. J.G. Roelfes

Beoordelingscommissie : Prof. dr. A. Herrmann
Prof. dr. D.B. Janssen
Prof. dr. A.J. Minnaard

Table of Contents

Preface	5
Aims and Outline of this Thesis	6
References	8
1 DNA in Metal Catalysis	9
1.1 General Introduction	10
1.2 DNAzymes	10
1.2.1 The Role of Metal Ions	11
1.2.2 RNA-Cleaving DNAzymes	12
1.2.3 Applications of RNA-Cleaving DNAzymes	16
1.2.4 Other Oligonucleotide Modifications Catalyzed by DNAzymes	17
1.2.5 DNAzymes for Small-molecule Transformations	18
1.3 DNA-directed and DNA-templated Metal Catalysis	20
1.3.1 DNA-directed Catalysis	21
1.3.2 DNA-templated Catalysis	23
1.4 DNA-based Asymmetric Catalysis	26
1.4.1 Covalent Approaches to DNA-based Asymmetric Catalysis	30
1.5 Summary and Outlook	31
1.6 Notes and References	32
2 DNA-based Hydrolytic Kinetic Resolution of Epoxides	39
2.1 Introduction	40
2.2 Results and Discussion	42
2.2.1 DNA-based Hydrolytic Kinetic Resolution of 2-pyridyloxirane	42
2.2.2 Effects of β -substituents on the Resolution of 2-pyridyloxiranes	46
2.2.3 Ring-opening by Nucleophiles other than Water	49
2.2.4 Attempted Enantioselective Corey-Chaykovsky Epoxidation Using DNA as the Chiral Scaffold	50
2.3 Conclusions	51
2.4 Experimental Section	51
2.5 Notes and References	57
3 Synthetic Applications of DNA-based Asymmetric Michael Reactions	61
3.1 Introduction	62
3.1.1 The DNA-based Michael Reaction	62
3.1.2 γ -Aminobutyric Acid Analogues	64
3.2 Results and Discussion	64
3.2.1 Scale-up of the Enantioselective DNA-based Michael Reaction	64
3.2.2 Removal of the Imidazole Auxiliary	66
3.2.3 Reduction of the Nitro Group to Give γ -Aminobutyric Acid Analogues	67

3.3 Extensions of the DNA-based Michael Reaction	69
3.3.1 Trapping of the Enolate Intermediate.....	69
3.3.2 Michael Addition to (Z)-enones	70
3.4 Conclusions.....	71
3.5 Experimental Section	71
3.5.1 DNA-based Synthesis of Michael Adducts on Preparative Scale (General Procedure 1).....	72
3.5.2 Removal of the Imidazole Group from Michael Adducts 3.2	74
3.5.3 Hydrolysis of Nitroesters 3.4	75
3.5.4 Reduction of Nitroacids 3.3 and Nitroester 3.4b	75
3.6 Notes and References	77
4 Kinetic Investigations of DNA-based Conjugate Additions	79
4.1 Introduction.....	80
4.2 Michael Reactions with Nitromethane and Dimethylmalonate.....	81
4.2.1 Mechanistic Information on Michael Reactions Catalyzed by Lewis Acids	81
4.2.2 The Effect of st-DNA on the Rate of the Michael Additions	83
4.2.3 The Effect of Catalyst Loading and pH on the Rate of Michael Reactions	87
4.2.4 Sequence Dependence of the Michael Reaction.....	88
4.3 The DNA-based Friedel-Crafts Alkylation of Indoles.....	91
4.3.1 Kinetic Study of the Friedel-Crafts Reaction: Screening of Substrates and Indoles	93
4.3.2 Activation Parameters of the Friedel-Crafts Reaction.....	95
4.3.3 Sequence Dependence of the Friedel-Crafts Reaction.....	98
4.4 Discussion.....	99
4.4.1 The DNA-based Asymmetric Michael vs. Friedel-Crafts Reactions.....	99
4.4.2 The DNA-based Conjugate Additions vs. Diels-Alder Reactions	100
4.5 Conclusions.....	101
4.6 Experimental Section	101
4.7 Notes and References	104
5 Limitations of DNA-based Catalysis.....	107
5.1 Introduction.....	108
5.2 The Zinc-catalyzed Asymmetric Mannich Reaction.....	108
5.2.1 Alternative Substrates for the Zinc-catalyzed Asymmetric Mannich Reaction.....	110
5.2.2 The DNA-based Asymmetric Mannich Reaction	112
5.3 Towards DNA-based Rh-catalyzed Asymmetric Hydrogenations of N- acetyl-dehydroalanine Derivatives	113
5.3.1 Introduction	113
5.3.2 A First-generation Ligand for Anchoring Rhodium(I) to DNA.....	114

5.3.3 DNA-based Rhodium-catalyzed Hydrogenations using Ligand L6.....	115
5.3.4 Noble Metal Complexes of a DNA-binding Ligand Based on Spermine and their Application in the Hydrogenation of Dehydroalanine Derivatives.....	118
5.3.5 Discussion.....	120
5.4 Attempted DNA-based Olefin Epoxidations and Sulfoxidations with Hydrogen Peroxide.....	121
5.4.1 The Asymmetric Juliá Epoxidation of Electron-poor Olefins.....	121
5.4.2 DNA-based Flavin-catalyzed Sulfoxidations of Thioanisole	122
5.5 Towards General Requirements for DNA-based Catalysis.....	124
5.6 Conclusions	125
5.7 Experimental Section.....	125
5.7.1 Zinc-catalyzed Mukaiyama-type Mannich Reactions.....	126
5.7.2 Rhodium-catalyzed Hydrogenation Reactions.....	128
5.7.3 DNA-based Epoxidation and Sulfoxidation Reactions	129
5.8 Notes and References	130
6 Transfer of Stereochemical Information from the Molecular to the Supramolecular Level.....	135
6.1 Introduction.....	136
6.1.1 Supramolecular Chemistry and Self-Assembly: Functional Materials.....	136
6.1.2 Supramolecular Chirality Transfer using Diarylethenes.....	138
6.2 The Effect of Chiral Noncomplementary ‘Sergeants’ on the Gelation Process	141
6.3 Supramolecular Chirality Induced by Stirring.....	149
6.4 Conclusions	152
6.5 Experimental Section.....	153
6.6 Notes and References	154
Appendix 1. List of Ligands.....	157
Appendix 2. List of Abbreviations	158
Appendix 3. Continuous Inversion Device, DyNAtor	160
Samenvatting – Supramoleculaire Chiraliteitsoverdracht	161
Dankwoord.....	165
